Tech Illustrator™ Breaks New Ground

ENHANCEMENTS INCLUDE NEW BOUNDARY DETECTION LOGIC

Westminster, Colorado, June 16, 2008--Denver-based Auto-trol Technology® today released a new version of Tech Illustrator™, which debuted last March. In the spirit of providing ongoing innovation for heightened productivity, the new product release addresses enhancement requests from customers and prospects.

Innovative new boundary detection logic provides immense utility, greatly enhancing illustrator efficiency in performing several common tasks:

- Application of colors, tones, and pattern fills to base artwork;
- Application of printable opaque masks to hide underlying art within the component stack; and
- Rapid creation of planar surfaces for driving 3D lightweight model construction. Tech Illustrator projects 3D objects to any conceivable orientation (paraline or perspective), and rapidly renders those objects to produce pictorial line art views used in technical manuals.

"We shall strategically deploy this new algorithm to pertinent actions throughout the application, thereby improving the efficiency and productivity of technical illustrators using our products," states Raghu Kalavacherla, Senior Manager – Product Development.

For more on Auto-trol Technology, visit <http://www.auto-trol.com>.

To purchase Tech Illustrator, e-mail a request for quote to sales@auto-trol.com. To view a product demo movie or obtain an evaluation license, visit:
