

TRN-K-CST KONFIG Customization Training

This course covers the customization of KONFIG using its published Application Programming Interfaces (APIs) and Customization Toolkits. Students will be taught how to customize their KONFIG application through a combination of lecture and lab exercises that mimic real-world scenarios. This course covers the material covered in the KONFIG Tailoring Training course, workflow customization, and the use of the KONFIG business API (bAPI).

Approximate course length: 5 days
